Literature Review

Store Sales Dataset Analysis | Junior Data Analyst Project

Track	DEPI – Junior Data Analyst
Tool	Power BI
Deadline	16 Oct 2026
Team	Omar Mohsen El Sayed (Team Leader), Malak Nashat Abdalhamed, Raghda Yasser Mohamed, Asmaa Mohamed Mohamed
Supervisor	Dr. Ahmed Ayman
GitHub	https://github.com/Omar822006

2. Literature Review

2.1 Background

Sales analysis helps retail organizations understand which products, regions and customer groups drive revenue. Business intelligence tools such as Power BI are widely used to turn raw transactional data into interactive dashboards that support decisions. The Superstore dataset is a commonly used retail dataset for practicing data cleaning, modeling and visualization.

2.2 Feedback & Evaluation

To be filled after the lecturer reviews the project.

Date	Lecturer feedback	Action taken

2.3 Suggested Improvements

- Add more advanced analysis such as profit and discount analysis if the data allows.
- Add drill-through pages for state and city details.
- Add time-intelligence measures (year-over-year growth).
- Improve dashboard design and accessibility (colors, labels, tooltips).

2.4 Final Grading Criteria

Component	Marks
Documentation	To be confirmed
Implementation	To be confirmed
Testing	To be confirmed
Presentation	To be confirmed
Total	To be confirmed

The marks breakdown will be added once the lecturer announces it.
