Requirements Gathering

Store Sales Dataset Analysis | Junior Data Analyst Project

Track	DEPI – Junior Data Analyst
Tool	Power BI
Deadline	16 Oct 2026
Team	Omar Mohsen El Sayed (Team Leader), Malak Nashat Abdalhamed, Raghda Yasser Mohamed, Asmaa Mohamed Mohamed
Supervisor	Dr. Ahmed Ayman
GitHub	https://github.com/Omar822006

3. Requirements Gathering

3.1 Stakeholder Analysis

Stakeholder	Role	Needs
Sales Manager	Decision maker	Understand sales performance by category and region; identify top and weak performers
Regional Managers	Decision maker	Compare performance across states and regions
Marketing Team	User	Know which customer segments and products to target
Operations / Logistics	User	Monitor shipping modes and delivery time
Executives	Decision maker	High-level KPIs and trends at a glance
Project Team / Lecturer	Developer / Evaluator	A clean, accurate and well-documented solution

3.2 User Stories & Use Cases

User stories

1. As a sales manager, I want to see total sales by category so that I can focus on the strongest product lines.
2. As a regional manager, I want to compare sales across regions and states so that I can find under-performing areas.
3. As a marketing analyst, I want to see sales by customer segment so that I can target campaigns.
4. As an executive, I want to see sales trends over time so that I can understand growth and seasonality.
5. As an operations manager, I want to analyze shipping mode usage so that I can improve delivery efficiency.
6. As any user, I want to filter the dashboard by date, region and category so that I can explore the data myself.

Use cases

Use case	Actor	Description
View sales overview	Manager / Executive	Opens the dashboard and sees the main KPIs
Filter data	Any user	Uses slicers (date, region, category, segment) to refine the visuals
Analyze products	Sales Manager	Drills down from Category to Sub-Category to Product
Analyze regions	Regional Manager	Compares regions, states and cities on a map and charts

Use case	Actor	Description
Analyze customers	Marketing	Identifies top customers and segments

3.3 Functional Requirements

ID	Requirement
FR1	The system shall load the Superstore dataset into Power BI.
FR2	The system shall clean the data (remove duplicates, fix date and data types, handle missing values).
FR3	The system shall calculate KPIs such as Total Sales, Average Sales per Order and Shipping Days.
FR4	The dashboard shall show sales by Category and Sub-Category.
FR5	The dashboard shall show sales by Region, State and City.
FR6	The dashboard shall show sales by Customer Segment and Ship Mode.
FR7	The dashboard shall show sales trends over time.
FR8	The dashboard shall provide slicers/filters (date, region, category, segment).
FR9	The dashboard shall support drill-down and cross-filtering between visuals.

3.4 Non-functional Requirements

Type	Requirement
Performance	Dashboard pages load and respond to filters within a few seconds.
Usability	Clear layout, consistent colors and labels, understandable by non-technical users.
Reliability	Data refresh completes without errors; results are consistent with the source data.
Accuracy	Totals in the dashboard match the cleaned dataset.
Security	Only authorized users can access the report; no sensitive personal data is exposed.
Maintainability	Clean data model and documented DAX measures so the dashboard is easy to update.

3.5 Assumptions & Constraints

- The dataset is historical and provided as an Excel file (sheet: Superstore Sales Dataset).
- The project uses Power BI as the main tool.
- Work must follow the course deadlines and be uploaded to GitHub.
